County of Santa Clara, Public Health Department
Global COVID-19 Data

https://coronavirus.jhu.edu/map.html
COVID-19 Epidemic, Santa Clara County, Jan. 27 – Oct. 1, 2020:
Case count has declined since mid-August

Figure: Lab-confirmed COVID-19 cases stratified by Long-Term Care Facility, outbreak, and community, reported by date of specimen collection

March 16: Shelter-In-Place Order

*37 cases not populated in graph due to missing specimen collection dates

Source: California Reportable Disease Information Exchange (CalREDIE), Data retrieved 0700 October 2, 2020.
COVID-19 Epidemic, Santa Clara County, June 27 – Sept. 25, 2020: Higher case rate among Latinos and African Americans since June, but rates declining since mid-August

Figure: Daily rolling average rate of lab-confirmed COVID-19 cases by race/ethnicity by specimen collection date

Note: Data are from June 27 to September 25 due to a 7-day lag.
Source: California Reportable Disease Information Exchange (CalREDIE), Data retrieved 0700 September 18, 2020.
COVID-19 Epidemic, Santa Clara County, Hospitalizations, Apr. 1 – Oct. 1, 2020:
Number of COVID+ hospitalized patients decreasing since late July

Figure: Number of COVID+ hospitalized patients per day

Source: EMResource Daily Hospital Bed Poll, Data retrieved 1300 October 1, 2020
COVID-19 testing among county residents, Santa Clara County

Figure: 7-day average test count and positivity rate of COVID-19 molecular tests among Santa Clara County residents by date of specimen collection, April 1 to October 1, 2020

Source: CalREDIE, Data as of October 2, 2020. Resulted specimens are reported. Note: State guideline = 1.5 tests per 1,000 people – 2995 tests daily.

Santa Clara County
- Orange Tier -

**Not yet allowed to resume:**

- *Concert venues*
- *Festivals*
- *Live theater*
- *Nightclubs*
- *Saunas and steam rooms*
- *Theme parks*
Santa Clara County - Orange Tier -

Not yet allowed to resume:

- Concert venues
- Festivals
- Live theater
- Nightclubs
- Saunas and steam rooms
- Theme parks
Reminders: What we know about SARS-CoV-2 transmission risk

- **Ventilation matters**: Outdoors is safer than indoors; well-ventilated indoor space is safer than poorly-ventilated indoor space
- **Masks significantly reduce risk**, especially when everyone wears them
- **Minimize your contacts** (small and stable social, work, and school cohorts)
- **Density matters**: the fewer that gather, the safer
- **Distance matters**: more distance is safer than less
- **Duration matters**: Shorter duration is safer than longer
How do we apply this to indoor dining?

- It’s indoors – less ventilation than outdoors
- Masks can’t be worn while eating and drinking

**So, to increase safety, we must:**
- Maximize Ventilation
- Limit Mixing – one household per table
- Decrease Density – limit the number of people inside at one time
- Distance – ensure tables are spaced out
- Duration – eat quickly and leave
Masks reduce airborne transmission

Infectious aerosol particles can be released during breathing and speaking by asymptomatic infected individuals. No masking maximizes exposure, whereas universal masking results in the least exposure.

![Diagram showing how masks reduce airborne transmission](https://example.com/diagram)

**Particle size (μm)**

<table>
<thead>
<tr>
<th>Size</th>
<th>100</th>
<th>10</th>
<th>1</th>
<th>0.1</th>
</tr>
</thead>
</table>

**Infected, asymptomatic**

**Healthy**

**Maximum exposure**

**Minimum exposure**
